

Faculty: BSC(Hons) Computer System Engineering

Name: Sadikshya Acharya

Student ID: 239679765

MODULE CODE: CET138

MODULE TITLE: Full Stack Development

MODULE LEADER: David Grey

SUBMISSION DATE AND TIME: Fri, 19 Jun 2026

ASSIGNMENT: 1

Academic Misconduct is an offence under university regulations, and this involves:

- **Plagiarism** – where you use information from another information source (including your previously submitted work) and pass it off as your own. This can be through direct copying, poor paraphrasing and/or absence of citations.
- **Collusion** – where you work too closely, intentionally, or unintentionally, with others to produce work that is similar in nature. This can be through loaning of materials, drafts or through unauthorised use of a fellow student's work.
- **Asking another person to write your assignment** – where you ask another individual or company to complete your work for you, be that paid or unpaid, and submit it as if it were your own.
- **Unauthorised use of artificial intelligence** – where you use artificial intelligence tools to generate your assignment instead of completing it yourself and/or where you have not been given permission to use artificial intelligence tools by your module leader. Please complete the following declaration around you use of artificial intelligence tools in your assignment.

STATEMENT ON USE OF ARTIFICIAL INTELLIGENCE TOOLS:

• I have used artificial intelligence tools to generate an idea for my assignment:	YES
• I have used artificial intelligence tools to write my assignment for me:	NO
• I have used artificial intelligence tools to brainstorm ideas for my assignment:	NO
• I have used artificial intelligence tools to correct my original assignment:	NO

DECLARATION

- I understand that by submitting this piece of work I am declaring it to be my own work and in compliance with the university regulations on Academic Integrity.
- I confirm that I have done this work myself without external support or inappropriate use of resources.
- I understand that I am only permitted to use artificial intelligence tools in line with guidance provided by my Module Leader, and I have not used artificial intelligence tools outside this remit.
- I confirm that this piece of work has not been submitted for any other assignment at this or another institution prior to this point in time.
- I can confirm that all sources of information, including quotations, have been acknowledged by citing the source in the text, along with producing a full list of the sources used at the end of the assignment.
- I understand that academic misconduct is an offence and can result in formal disciplinary proceedings.
- I understand that by submitting this assignment, I declare myself fit to be able to complete the assignment and I accept the outcome of the assessment as valid and appropriate.

What is the Bootstrap Framework?

The Bootstrap Framework is an open-source CSS framework that provides pre-built components a responsive grid system and JavaScript plugins for rapid web development. It includes made UI elements like navigation bars, cards, buttons, modals, forms and alerts that follow consistent design patterns.

The Bootstrap Frameworks 12-column responsive grid system allows developers to create layouts that automatically adapt to screen sizes using simple class names like col-12, colmd-6, col-lg-4. It also includes a utility- approach with classes for spacing, colors, typography and more.

Understanding the Bootstrap Framework is valuable when writing custom CSS as these concepts represent industry-standard approaches to responsive design.

The Bootstrap Framework speeds up development. Knowing its underlying principles, such as the grid, components and responsive utilities is important.

Why does the Bootstrap Framework matter in web development?

The Bootstrap Framework remains one of the widely used frameworks in professional web development. Many companies and teams rely on it for consistency across projects. Understanding the Bootstrap Framework makes developers more employable. Helps them work effectively in team environments where the framework is already in use.

When not using the Bootstrap Framework directly its design patterns and responsive approaches influence modern CSS practices and component libraries.

How does NepalRide demonstrate the Bootstrap Framework?

Although NepalRide is built with custom CSS the Portfolio section includes a Bootstrap simulation panel that demonstrates understanding of the Bootstrap Framework. This panel shows a themed navbar, dismissible success alert, status badges and a responsive grid example using the Bootstrap Frameworks column classes.

The demo recreates the Bootstrap Frameworks appearance and component patterns without actually loading the Bootstrap library proving conceptual understanding rather than just copying code.

The grid example shows three car columns that would stack on devices demonstrating the responsive 12-column system in action. Code Example 1. Core Implementation

```
<!-- Bootstrap Grid Simulation --> <div  
style="display: grid; grid-template-  
columns: repeat(auto-fit,  
minmax(200px, 1fr)); gap: 1rem;">  
<div class="col-12 col-md-6 col-lg-4">  
<!-- Car card content -->  
</div>  
<div class="col-12 col-md-6 col-lg-4">  
<!-- Car card content -->  
</div>  
</div>
```

Code Example 2. Interactive Feature

```
<!-- Bootstrap Alert Simulation -->  
<div style="background: #d1e7dd;  
border: solid #badbcc; color:  
#0f5132; padding: 1rem; border-  
radius: 6px;">  
<strong>Success:</strong> Scorpio-N SUV initialized  
in regional node.  
</div>
```

Visual Demonstrations & Screenshots from NepalRide The Bootstrap simulation panel in NepalRides Portfolio section provides visual evidence of the Bootstrap Framework understanding. It includes a navbar matching the Bootstrap Frameworks brand colors, a dismissible alert box, status pills and a responsive grid layout.

The demo shows three car cards in a grid that would automatically reflow on smaller screens demonstrating practical knowledge of the Bootstrap Frameworks column system.

Figure 1: Bootstrap Simulation Panel

Shows a Bootstrap-style interface with navbar, success alert, status badges and responsive grid. Uses the Bootstrap Frameworks color scheme and component patterns without loading the actual library.

Figure 2: Responsive Grid Example

Three car columns using col-12, col-md-6, col-lg-4 classes. Demonstrates how the Bootstrap Frameworks grid system creates layouts that stack on mobile devices.

Key Features & Technical Implementation Details

The Bootstrap demo in NepalRide recreates key Bootstrap Framework features: the 12column grid system, component styling patterns, utility classes for spacing and colors and mobile-first responsive behavior.

The simulation uses inline styles and CSS to match the Bootstrap Frameworks appearance while demonstrating understanding of its underlying architecture.

The panel also shows how the Bootstrap Framework components work together in a design system.

Implemented Features in NepalRide:

- Complete Bootstrap-style navbar with brand and navigation

Challenges Faced & Solutions Applied

Challenge: Demonstrating the Bootstrap Framework knowledge without using the library.

Solution: Created a simulation using CSS that matches the Bootstrap Frameworks appearance and component patterns.

Challenge: Making the simulation educational. Solution: Included labels showing the exact class names used in real Bootstrap Framework projects.

Challenge: Keeping the demo relevant to the car rental theme. Solution: Used car cards and rental status messages that fit the NepalRide context.

Personal Reflection & Learning Outcomes

Although I chose to build NepalRide with custom CSS for creative control I knew the Bootstrap Framework remains important in the industry. Creating the simulation panel helped me understand the Bootstrap Frameworks architecture and component system without copying code.

The exercise showed me the value of understanding frameworks when not using them directly. The Bootstrap Frameworks grid system and component patterns represent industry practices that influence how modern interfaces are built.

I now feel confident that I could work effectively in a team using the Bootstrap Framework or quickly adapt to component frameworks.

Learning Outcomes Achieved:

- Demonstrated understanding of the Bootstrap Frameworks 12-column grid system.

The Bootstrap simulation panel in NepalRides Portfolio demonstrates understanding of the Bootstrap Frameworks core concepts and component patterns. While the main site uses custom CSS the demo shows I can work effectively with the Bootstrap Framework when required. This dual approach. Custom CSS for projects and Bootstrap familiarity for team environments. Provides valuable flexibility, for future development work.
